

All About Bees

Where Do Bees Live?

Some types of bees live together in nests.
Other types of bees live alone.

What Do Bees Look Like?

Bees have four wings and six legs.
Female bees have stingers.

What Do Bees Eat?

Bees get all their food from plants.
They like to eat nectar and pollen
from flowers.

Types of Bees

There are lots of different types of bees! Here are some you can spot
in the UK.

honeybee

bumblebee

mason bee

Questions

All About Bees

1. Where do bees live? **Tick one.**
 - in a school
 - in a computer
 - in a nest

2. How many wings do bees have? **Tick one.**
 - four
 - three
 - six

3. Which bees have stingers? **Tick one.**
 - female bees
 - male bees
 - both male and female bees

4. Where do bees get all their food from? **Tick one.**
 - the supermarket
 - plants
 - people

5. Which of these is a type of bee? **Tick one.**
 - stumblebee
 - grumblebee
 - bumblebee

 - bumblebee**

All About Bees

Where Do Bees Live?

Bees can be found all over the world except in Antarctica.

Some types of bees live in groups called 'colonies'. Other types of bees live alone.

What Do Bees Look Like?

Bees are a type of insect. They have four wings and six legs.

Only female bees have stingers. They use their stinger to protect themselves and their nest.

What Do Bees Eat?

Bees get all their food from plants.

They like to eat nectar and pollen from flowers. Nectar is a sticky liquid. Pollen is a yellow powder.

Types of Bees

There are lots of different types of bees! In the UK, the most common types of bees are honeybees and bumblebees.

Honeybees

Most honeybees live in beehives.

They make honey so that they have something to eat in winter. This is because there are fewer flowers to feed from.

Honeybees perform a 'waggle dance'. This is a way of moving their bodies to tell other bees where they can find food.

Bumblebees

Bumblebees live in nests. Some types of bumblebees build their nests underground.

Bumblebees have smelly feet! They use this smell to tell each other apart.

Questions

All About Bees

1. Bees can be found all over the world, except in _____. **Tick one.**

- the UK
- America
- Antarctica

2. What are groups of bees called?

3. Label the bee.

4. What do bees like to eat?

5. Fill in the missing word.

Bumblebees have _____ feet!

- big
- smelly
- pink

1. Bees can be found all over the world, except in _____. **Tick one.**

- the UK
- America
- Antarctica**

2. What are groups of bees called?

colonies

3. Label the bee.

4. What do bees like to eat?

nectar and pollen (from flowers)

5. Fill in the missing word.

Bumblebees have **smelly** feet!

All About Bees

Habitats

Bees can be found all over the world except in Antarctica.

Some types of bees live in large groups called 'colonies'.

There can be around 50,000 bees in one colony!

Other types of bees live alone. These are called 'solitary bees'. These bees live underground, in trees or in small holes.

Appearance

Bees are a type of insect. They have four wings – one pair of large wings at the front and one pair of smaller wings at the back.

Only female bees have stingers. If they feel threatened, they will sting to protect themselves or their nest.

Diet

Bees get most of their food from plants.

Bees like to eat nectar and pollen from flowers. Nectar is a sticky liquid. It is very sugary and gives the bees energy. Pollen is a yellow powder.

When bees visit flowers, they pick up and drop pollen from one flower onto another. The plant then uses this pollen to make new seeds. This is called 'pollination'.

Types of Bees

There are around 25,000 different types of bees! In the UK, you might see mason bees, leaf-cutter bees and mining bees, among others.

mason bee

leaf-cutter bee

mining bee

The most common types of bees are honeybees and bumblebees though.

Honeybees

Most honeybees live in an apiary. This is a collection of beehives (nests) that were made by people.

Honeybees make honey so that they have something to eat in winter. This is because there are fewer flowers to feed from.

Did You Know...?

Honeybees perform something called the 'waggle dance'. This is a way of moving their bodies to tell other bees where they can find lots of food.

Bumblebees

Bumblebees like to live in areas with lots of flowers. They live in nests in dark places, such as bird boxes and thick grass. Some types of bumblebees build their nests underground.

Bumblebees are excellent pollinators. This is because pollen sticks more easily to their fuzzy bodies.

Did You Know...?

Bumblebees have smelly feet! They use this smell to tell each other apart.

Questions

All About Bees

1. What is the name of the yellow powder made by flowers? **Tick one.**
 honey
 nectar
 pollen
2. In your own words, what do female bees use their stinger for?

3. Find and copy the **noun** that is used for animals that pollinate plants.

4. Draw four lines to match each word with its meaning.

<input type="checkbox"/> apiary	<input type="checkbox"/> a place where an animal lives
<input type="checkbox"/> habitat	<input type="checkbox"/> a sticky liquid found in flowers
<input type="checkbox"/> nectar	<input type="checkbox"/> existing or living alone
<input type="checkbox"/> solitary	<input type="checkbox"/> a collection of beehives
5. What is the 'waggle dance'?

6. Do you think it's important that bees pollinate flowers? Why?

Answers

All About Bees

1. What is the name of the yellow powder made by flowers? **Tick one.**
 honey
 nectar
 pollen
2. In your own words, what do female bees use their stinger for?
to protect themselves and their nest (Accept any version of this.)
3. Find and copy the **noun** that is used for animals that pollinate plants.
pollinators
4. Draw four lines to match each word with its meaning.

5. What is the 'waggle dance'?
the way honeybees move their bodies to tell other bees where they can find lots of food (Accept any version of this.)
6. Do you think it's important that bees pollinate flowers? Why?
Children's own answers.
